

Healthy Habitats

Hamilton is a very green city even though a lot of Hamilton residents live in an urban community. Hamilton's natural landscape includes the Niagara Escarpment, Hamilton Harbour, Cootes Paradise, Beverly Swamp, Eramosa Karst and the Dundas Valley.

Each of these destinations are home to its own unique habitat! Some of these habitats include swamps, bogs, forests, meadows, and thickets.

What do you think is needed for a healthy habitat?

(Hint: Include both living and non-living items!)

Living

Non-Living
